

BrandSight — Milestones

##Milestone 1: Project Setup & Shopify Integration

1. Initialize React project and configure Python as the backend
2. Set up PostgreSQL database (Neon serverless) with core schema
3. Implement Shopify OAuth flow for public app, embedded via App Bridge
4. Configure session tokens and online/offline token handling
5. Set Shopify API scopes (read_products, read_orders, read_customers, read_inventory, write_script_tags)
6. Subscribe to webhooks: orders, products, customers, GDPR-related events
7. Implement initial data synchronization (historical orders, products, customers)

##Milestone 2: Vendor/Brand Performance Analytics Module

1. Design responsive dashboard for vendor metrics using React + Tailwind
2. Build sortable and filterable table with key metrics (Revenue, AOV, Conversion Rate, Growth Rate)
3. Implement search and date-range filtering (7, 30, 90 days, custom)
4. Backend APIs to aggregate vendor data from orders and products
5. Enable CSV/Excel export functionality with proper formatting
6. Pagination for large datasets.

##Milestone 3: Sales Analytics Module

1. Build interactive line charts for revenue trends per vendor
2. Create bar charts for brand comparison
3. Implement top-selling products by brand view
4. Show order distribution and landing page performance per vendor
5. Backend APIs for sales aggregation and metrics

6. Include sales velocity and trend detection

##Milestone 4: Customer Brand Loyalty Module

1. Compute Brand Affinity Score for each customer
2. Identify loyalty segments: single-brand loyalists, multi-brand shoppers, brand switchers
3. Track repeat purchase rate and CLV by brand
4. Build a dashboard to visualize cross-brand purchase behavior
5. Backend APIs for customer loyalty metrics and aggregation

##Milestone 5 Smart Alerts System

1. Develop alert configuration UI (types: revenue drop/spike, low inventory, trend anomalies)
2. Set up thresholds, severity levels, and monitoring timeframes
3. Implement in-app notifications and email alerts
4. Backend logic to evaluate alert conditions and trigger notifications
5. Alert management panel to view history, acknowledge or dismiss alerts

##Milestone 6 Product Performance Module

1. Product listing grouped by vendor
2. Display metrics per product: units sold, revenue, stock status
3. Identify top-performing and underperforming products
4. Comparison of products across vendors
5. Backend API for product-level performance data aggregation

##Milestone 7 Reports & Data Export

1. Export analytics in CSV and Excel (multi-sheet, formatted)
2. Support filtered exports (date ranges, selected vendors)
3. Streamed export handling for large datasets
4. Integrate export functionality with dashboard UI

##Milestone 8 Webhooks & Data Synchronization

1. Implement real-time data sync for orders, products, and customers
2. Handle GDPR-related deletion/export events
3. Retry logic and error handling for failed webhook deliveries
4. Background job processing for large data sync and heavy analytics operations

##Milestone 9 Subscription Plan / Deployment & Testing

1. Starter Plan: \$79/month - Basic vendor analytics

- a. Up to 10 brands/vendors
- b. 90-day data history
- c. Core analytics dashboard
- d. Email support
- e. CSV export

2. Growth Plan: \$149/month - Advanced features + Smart Alerts

- a. Up to 50 brands/vendors
- b. 1-year data history
- c. Advanced analytics
- d. Priority support
- e. Custom reports

3. Scale Plan \$299/month All features + Priority Support

- a. Unlimited brands/vendors
 - b. 5-year data history
 - c. White-label reports
 - d. Priority support
 - e. Custom reports
4. All plans include a 3-day free trial.
5. Billing through Shopify.

Deployment & Documentation and Security, Testing & QA

- 1. Validate OAuth and session token flows
- 2. Secure API endpoints and backend data
- 3. Unit and integration tests for backend and frontend
- 4. QA for dashboards, charts, alerts, tables, and exports
- 5. Ensure GDPR and Shopify compliance
- 6. Deploy backend/frontend to the production environment
- 7. Configure CI/CD pipeline for future updates
- 8. Write technical documentation for API endpoints
- 9. Prepare user guides for alerts, analytics, and reports
